

- (vi) Toon aan (d.m.v. integrasie) dat die arbeid wat deur hierdie veerkragte verrig word om die massa van $x = A$ na $x = 0$ te beweeg, gegee word deur:
Show (with integration) that the work done by those two spring forces to move the mass from $x = A$ to $x = 0$ is given by:

$$W = 2kL^2 + kA^2 - 2kL\sqrt{A^2 + L^2}$$

waar / where $\int \frac{x}{\sqrt{x^2 + L^2}} dx = \sqrt{x^2 + L^2}$

_____ (5)

- (vii) Met $L = 1,2$ m, $k = 40$ N/m en $m = 0,5$ kg, bereken die energie wat in die vere gestoor is wanneer hulle $0,5$ m uitgerek is.

With $L = 1,2$ m, $k = 40$ N/m and $m = 0,5$ kg determine the energy stored in the springs when they are stretched by $0,5$ m.

_____ (3)

- (viii) Bepaal die spoed van die massa wanneer dit deur die ewewigsposisie gaan.

Determine the speed of the mass while it is moving through the equilibrium position.

_____ (3)

VRAAG / QUESTION 4

- (a) Kragte wat op 'n liggaam inwerk is sodanig dat $\sum \vec{F} \neq 0$. Gee Newton se tweede wet.
For different forces acting on an object $\sum \vec{F} \neq 0$. Give Newton's second law.

_____ (1)
