

9

- (v) As  $m_2$  groot is, sal  $m_1$  neig om op te beweeg.  
*With  $m_2$  large,  $m_1$  would tend to move upwards.*

Die som van die kragte in die x-rigting op  $m_1$  (gee in simbole): / *The sum of the forces in the x-direction on  $m_1$  (give in symbols):*

- (vi) Bepaal nou  $m_2$  met  $m_1 = 10$  kg. / *Now, determine the value of  $m_2$  with  $m_1 = 10$  kg*

- (vii) As  $m_2 = m_1 = 10$  kg. en  $\mu_k = 0,3$  is, toon aan die versnelling van die sisteem is  $a = 0,78 \text{ m/s}^2$ .  
*With  $m_2 = m_1 = 10$  kg. and  $\mu_k = 0,3$ , show that the acceleration of the system is  $a = 0,78 \text{ m/s}^2$ .*
