

- (iv) Bepaal die spankrag T in die tou.
Determine the tension T in the rope.

$$m_1 = T - mg \sin \theta - f_k =$$

VRAAG / QUESTION 3

- (a) 'n Veer met veerkonstante k word 'n afstand x uitgerek. Skryf 'n uitdrukking neer vir die krag F_s in die veer.
A spring with spring constant k is stretched over a distance x . Give an expression for the spring force F_s .

$$F_s = -kx$$

(1)

- (b) 'n Massa is vas aan twee identiese vere, beide met dieselfde veerkonstante k . Die massa word 'n afstand x langs die x -as getrek vanaf die oorspronklike onuitgerekte posisie.
A mass is attached between two identical springs. The spring constant of each spring is k . The mass is pulled over a distance x along the x -axis from the initially unstretched position.

- (i) Skryf 'n uitdrukking neer vir die (nuwe) uitgerekte lengte ℓ van die veer.
Give an expression for the (new) stretched length ℓ of the spring.

$$\ell = \sqrt{L^2 + x^2}$$

(1)
