

Program Structure and Output

L03 - Program Structure

Department of Computer Science
University of Pretoria

26 February 2024

- C++ was designed and implemented in 1979 by Bjarne Stroustrup
 - Stroustrup is still active in the development of C++ to this day
- The first version of C++ was released in 1983

- C++ is derived from C and initially called *C with Classes*.
 - It brings the Object Oriented paradigm to a previously (C) imperative programming language.
 - The ++ is derived from the C/C++ increment operator.

- In 1985, *The C++ Programming Language* textbook was published. The 4th edition was published in 2013.
- C++ support was incorporated in GCC 1.15.3 in 1987
- Current version of GCC is 13.2, dated 27 July 2023

- 1990 the ANSI C++ committee was founded
- C++ Standards
 - C++ 98/03 (1998 to 2003), C++11 (2011), C++14, C++20, awaiting C++26

<https://en.cppreference.com/w/cpp/language/history>

```
1 #include <iostream>
2
3 using namespace std;
4
5 int main() {
6     //Your code here
7     return 0;
8 }
```

Important parts of a C++ program

- keywords
- compiler directive
- namespace
- main function
- statement
 - block statement
 - return statement
- comments

```
1 #include <iostream>
2
3 using namespace std;
4
5 int main() {
6     //Your code here
7     return 0;
8 }
```

- keywords - in **bold**

```
1 #include <iostream>
2
3 using namespace std;
4
5 int main() {
6     //Your code here
7     return 0;
8 }
```

- compiler directive

```
1 #include <iostream>
2
3 using namespace std;
4
5 int main() {
6     //Your code here
7     return 0;
8 }
```

- namespace

```
1 #include <iostream>
2
3 using namespace std;
4
5 int main() {
6     //Your code here
7     return 0;
8 }
```

- main function

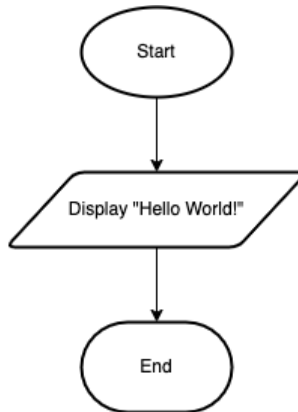

```
1 #include <iostream>
2
3 using namespace std;
4
5 int main() {
6     //Your code here
7     return 0;
8 }
```

- statement

```
1 #include <iostream>
2
3 using namespace std;
4
5 int main() {
6     //Your code here
7     return 0;
8 }
```

- comments

The abstraction

```
#include <iostream>
```

```
int main() {  
    std::cout << "Hello World!"  
               << std::endl;  
    return 0;  
}
```
